## 1. Scope of Application

Sidra Capital (“Sidra Capital” or the “Company”) is a Saudi closed joint stock company registered in Jeddah, Kingdom of Saudi Arabia (“KSA”) under Commercial Registration No. 4030187025 on February 25, 2009, corresponding to 30/2/1430H. The Company commenced its operation as per the resolution of the Ministry for Commerce and Industry dated January 24, 2009, corresponding to 27/1/1430H.

The Pillar III Disclosures (“Disclosures”) contained herein relate to the audited financials of the Company for the financial year ended December 31, 2018. These are compiled in accordance with the Capital Market Authority’s (“CMA”) minimum requirements for annual market disclosure of information as referred to by the Part 7 “Pillar III – Disclosure and Reporting” of the Prudential Rules. These rules include guidelines for the annual market disclosure of the Company’s capital and risk management information required to be published on the Company’s website.

The Company is not part of any financial group and is operating from its main office in Jeddah, KSA and an office in Riyadh, KSA. The Company also has a subsidiary based in London, United Kingdom (UK). Sidra Capital (UK) Limited was established in London, UK to enhance existing in-house capability in relation to investment into the UK and European real estate markets with an issued and paid-up capital of £100,000 which the Company owns 100%.

This Disclosures have been approved by the Company’s Board of Directors (“Board”) before its publication. The information presented in this Disclosures is not required to be and has not been subjected to external audit.

### 1.1 Company Background

The Company’s principal activities include dealing in securities as principal and underwriting, managing, custody, arranging and advising activities.

The Company’s organisation structure is provided in Appendix 1.

In 2018, the Company applied for approval to amend its business profile by adding Dealing as Agent activities. The purpose of the license is to enable distribution of units of foreign funds in the KSA as per the new Investment Funds Regulations (IFR) issued by the CMA. The CMA Board of Commissioners issued its resolution on May 28, 2018 approving the amendment of the business profile of the Company by adding Dealing as Agent license. The Company commenced its Dealing as Agent activities on January 2, 2019.

The focus is on Asset Management (alternative investment universe, such as real estate and structured trade finance) and Corporate Finance & Advisory (debt advisory, private placements and financial advisory).

**A. Asset Management Division (AMD)**

Our Asset Management business focuses on the development and management of domestic and international real estate, global structured trade finance and private equity investments for institutional clients, family offices and high net worth individuals. We have a strong track record in generating excellent risk-adjusted returns and our innovative, award winning products are uniquely structured to maximize value to benefit our clients. We follow the highest compliance standards and have a strong emphasis on thorough detailed analysis to support the investment process. This in-depth knowledge and detailed understanding forms the core of our investment process. The asset management team has a diverse mix of skills and backgrounds providing a combination of international best practice and local market knowledge.

**B. Corporate Finance and Advisory Division (CFA)**

Provision of client-focused financial and strategic advisory solutions, ranging from debt restructuring, private debt raising, public equity offering, private equity placement, corporate restructuring and mergers and acquisition. Intense business competition, regional liquidity constraints and growing risk premiums, provide a challenging backdrop for investors and business owners to raise capital efficiently. Sidra Capital's unique understanding of the changing operating climate coupled with experienced investment bankers is ideally placed to create value-added bespoke solutions to small-to-mid cap companies, high net worth individuals and family offices.

**C. Investment Advisory Division (IAD)**

The Investment Advisory offers clients advisory on investment portfolio development, assets allocation, assessment of opportunities and selection of asset managers, based on the investment objectives of each client. Our existing network of relationships provides us with access to a wide range of investment products, strategies, asset managers and expertise with which to support the realisation of the established investment objectives. Wealth advisory is becoming the forefront of the unit amidst awareness concerning global wealth protection and efficient wealth management.

## 2. Capital Structure

The Company's objectives when managing its capital are to comply with the capital requirements set by the CMA to safeguard and sustain the Company's ability to continue as a going concern and to maintain a tenable capital base.

The current paid-up capital of the Company is SAR 90,000,000 and the shareholding is as per details given below:

Shareholder	Ownership
Al Murjan United Arabia Limited	91.44%
Ahmed Salem Bugshan	5.56%
Abdulrahman Khalid Bin Mahfooz	1%
Sultan Khaled Bin Mahfouz	1%
Talid Arabia Trading Company	1%

### Restrictions on Capital

- The shareholders and/or the Company are not permitted to sell their shares, increase or reduce ordinary share capital or issue rights without the authorisation of the CMA.
- Statutory Reserve - In accordance with the Regulations for Companies in Saudi Arabia and after recovering any accumulated losses, the Company will start establishing a statutory reserve through the appropriation of 10% of the reported net income until the reserve reaches 50% of the issued and paid-up share capital. The new Regulations for Companies that came into effect on 25 Rajab 1437H (corresponding to May 2, 2016) require companies to set aside 10% of its net income each year as statutory reserve until such reserve reaches 30% of the issued and paid-up share capital. This reserve is not available for dividend distribution. The Company has transferred SAR 1.7 m to statutory reserve for the year. As at December 31, 2018 the total statutory reserve was SAR 2.6 m.
- During the year ended December 31, 2013, new Prudential Rules ("Rules") were introduced by the CMA pursuant to its Resolution Number 1-40-2012 dated 17/2/1434H corresponding to December 30, 2012. The Rules state that an Authorised Person shall continually possess a capital base which corresponds to not less than the total of the capital requirements as prescribed under Part 3 of Rules.

## 2.1 Quantitative Disclosure

### 2.1.1. Tier 1 Capital

Tier 1 Capital of the Company consists of paid-up capital, reserves (other than revaluation reserves) and audited retained earnings and has deductions in the form of dividend distribution from retained earnings and negative equity items. The Company's main strength in terms of its capital is that all of the capital is in the form of Tier I Capital. The Company has a comfortable cushion for capital shocks.

### 2.1.2. Tier 2 Capital

Tier 2 Capital consists of subordinated loans, cumulative preference shares, revaluation reserves and other eligible capital items in accordance with the Rules. The Company does not have any Tier 2 Capital.

### 2.1.3. Tier 3 Capital

The total eligible capital (Tiers 1 and 2) is calculated in accordance with the CMA guidelines as of December 31, 2018 is as follows

**SAR 000**

Capital Base	31 Dec 2018	31 Dec 2017	%
<b>Tier-1 Capital</b>			
Paid-up capital	90,000	90,000	
Audited retained earnings / losses	18,333	7,865	133 %
Share premium			
Reserves (other than revaluation reserves)	2,685	955	181 %
Tier-1 Capital contribution			
Deductions from Tier-1 Capital	(112)		N/A
<b>Total Tier-1 Capital</b>	<b>110,906</b>	<b>98,820</b>	<b>12 %</b>

**SAR 000**

Capital Base	31 Dec 2018	31 Dec 2017	%
<b>Tier-2 Capital</b>			
Subordinated loans			
Cumulative preference shares			
Revaluation reserves			
Other deductions from Tier-2 Capital (-)			
Deduction to meet Tier-2 Capital limit (-)			
<b>Total Tier-2 Capital</b>			
<b>TOTAL CAPITAL BASE</b>	<b>110,906</b>	<b>98,820</b>	<b>12 %</b>

### 3. Capital Adequacy

The purpose of risk measurement and management is to identify and quantify all identifiable and inherent risks faced by the Company, mitigate and manage such risks within the context of the Company's overall risk appetite. The Company is engaged exclusively in financial advisory and asset management related services and does not take leverage on its balance sheet. The Company aims to consistently maintain an amount of capital that is in excess of the minimum regulatory capital recommended by the CMA.

Risk is part of the business and the Company needs to effectively identify, measure, monitor and manage each of the risks that are likely to emerge during its operations. The Board will continue to review the material risks and consider the results of the work of the management in mitigating those risks.

The capital adequacy for the Company is calculated based on the financial reporting period ended December 31, 2018 and is based on the audited financial statements.

The Company's capital requirement is calculated based on the Rules. The Company's minimum capital requirement is SAR 51.4 m as of December 31, 2018. Details are provided in Appendix 2.

#### 3.1 Capital Adequacy Assessment and Pillar II - ICAAP

The Internal Capital Adequacy Assessment Process ("ICAAP") is introduced under Pillar II of the Prudential Rules, which is contained in Part 6 (Article 66) and Annex 9 of the Prudential Rules approved by the CMA and to be implemented by all Authorised Persons.

Premised on the assessment, the Company is well capitalized and will be able to allocate capital for both Pillar 1 and Pillar 2 risks.

#### 3.2 Capital Planning

Capital planning is crucial to ensure sustainability of business and facilitates management in making strategic decisions. The Company's capital planning process incorporates rigorous, forward looking stress testing to indicate how much capital might be needed to absorb losses if large shocks occur. Effective capital planning process requires the Company to assess risk exposures and consider the potential impact on earnings and capital.

Capital planning is done based on present level of business activities and projected business activities for the future. The Company projects its capital requirements on an annual basis and also for the next three years.

## ***Basel Pillar III Disclosures***

---

The Company has a general contingency plan for dealing with divergences and unexpected events. The Company has a single major shareholder that can provide for additional capital in the event of major events. The Company may also recalibrate its business activities to focus on activities that require lower capital requirements.

The Company defines overall risk appetite relating to capital adequacy. As part of this, Early Warning Indicator (“EWI”) levels are established to enable the Company to take adequate measures on a timely basis. Action plan for capital management and monitoring are triggered as part of ICAAP process on any breach of established EWI. The risk appetite and capital ratio EWI triggers are defined in the ICAAP policy. In case the capital ratios are projected to fall below regulatory and acceptable levels, the Company shall consider taking actions to either reduce exposures or enhance capital or do both of these.

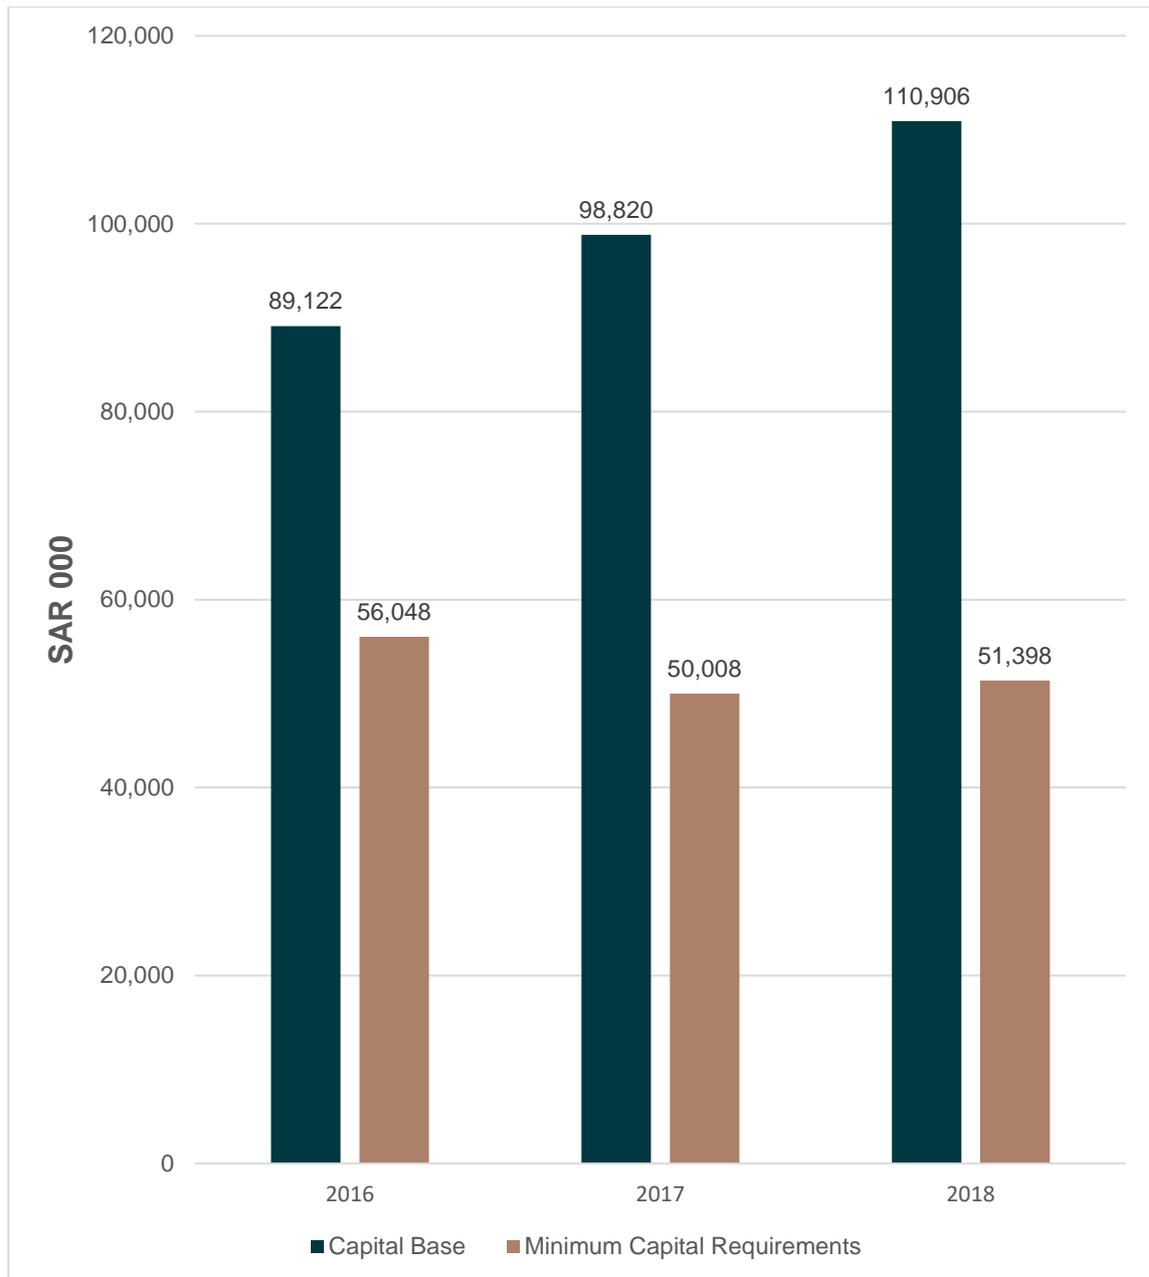

### **3.3 Stress Testing**

The Company has defined a formal approach to stress testing and scenario analysis that defines the framework and approach for conducting stress tests to assess the impact on earnings and capital. Stress scenarios have been designed for material risk factors.

Stress testing is used to evaluate potential vulnerability of risk management system of the Company to certain unlikely but plausible events or movements in financial variables. Stress testing can be done by using sensitivity analysis (wherein impact of change in one variable is assessed on the Company’s financial position) or using scenario test (which include simultaneous moves in a number of variables based on a single event experienced in the past).

### **3.4 Minimum Capital Requirements**

The Company is currently well capitalised and capital levels are consistently higher than the minimum capital requirements. The following provides the capital buffer over the past three years.

#### 4. Risk Management

The diversified business activities require the Company to identify, measure, aggregate, monitor and manage risks effectively and to allocate capital among its businesses appropriately.

Given the size of the Company and its operations, the Company has adequate risk management framework to identify and manage key risks. The Company has established a separate risk function and refined its key risk management policies which are approved. The Company is working towards integrating risk management into its operations and culture and sustaining a robust risk management environment as an integral part of its operations.

## ***Basel Pillar III Disclosures***

The Company has a strong corporate governance structure by way of various board and management committees and documented policies/ procedures. This ensures that management and governance related risks are well managed. They also take into serious considerations the interests of various stakeholders of the organisation including the regulators, clients and business partners.

The Board is responsible for the overall governance of the Company. This includes, determining the strategy, providing direction to the Senior Management, ensuring that the control functions are robust and that they conform as much as possible to international best practices. The Company also has adequate risk governance framework as part of strengthening its corporate governance and risk management structures.

An outsourced internal audit function provides oversight / third line of defence over internal controls.

### **Risk Management Function**

The Company operates in a complex and dynamic business environment which give rise to a variety of risks that can be both threat and opportunity. Recognizing that these risks are inherent to its business, Sidra Capital is committed to managing its overall risk exposure systematically and in such manners that support its strategic decision-making process.

Historically, it has been more inclined towards a qualitative approach to risk management. A broader perspective has now been adopted, with greater emphasis on the quantification of all risks, as part of decision making. This new approach also improves response to the need for institutional and regulatory data on matters such as capital adequacy ratios.

Furthermore, the Company has set-up an independent Risk and Internal Audit division (RIAD) to align its workforce towards better risk management with the intent of maximizing shareholder value as a whole.

### **Risk Management Cycle and Oversight**

The Company continues to strengthen the robust risk management governance framework to efficiently manage the risks undertaken.

The purpose for having a robust Risk Governance Framework is to provide for the following:

- An efficient decision-making structure that is fair, transparent and accountable, and aligns the interests of investors, management and employees with those of its shareholders, financiers and investors.

**Basel Pillar III Disclosures**

- A structure that oversees the Company’s adherence to Shari’ah principles in the conduct of its business and other activities.
- Establish a Risk Governance Organization Structure, along with roles and responsibilities of the Board, Board-level committees, management-level committees, business units, RIAD and other support functions, to effectively manage all financial and non-financial risks impacting the Company.

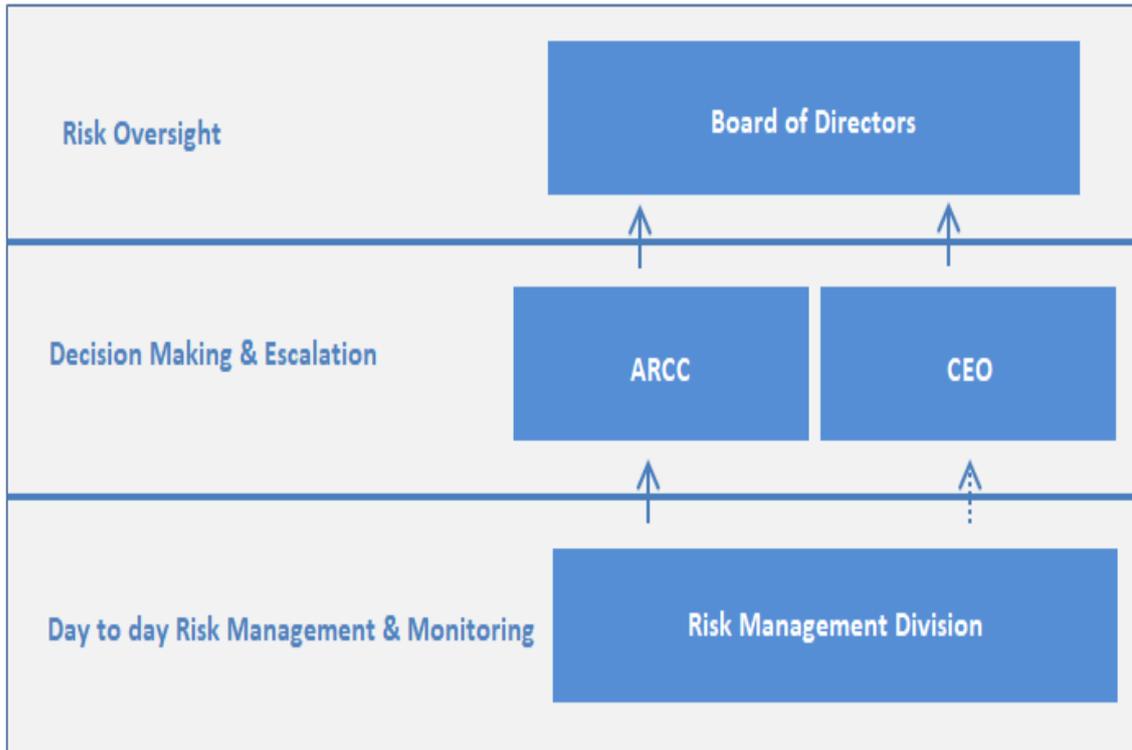

Depicted below is the schematic representation of the overall risk management framework practiced by the Company:

**RIAD Structure**

The day to day risk management activities is currently undertaken by RIAD. The CEO is responsible for the oversight of the functions in addition to the Board level oversight by the ARCC.

The risk management functional structure is depicted below:

**Functional Reporting**

**Risk Appetite**

The Company's risk appetite is the single most influential factor in its fundamental risk attitude. Risk appetite is defined as the amount and type of risks that the Company is willing to take within the context of its business strategy. Risk appetite is either quantitatively defined by the appropriate indicators (e.g. capital adequacy level and risk limits) or qualitatively embedded in the policies and procedures (e.g. underwriting criteria).

Within the risk appetite levels specified, specific risk limits may be fixed to monitor risks on an ongoing basis. Such risk limits shall ensure that the Company operates within its target range and does not exceed its aggregate risk tolerance. The Company's risk tolerance levels and risk limits are part of the various existing policy and process documents.

Any breach of EWI or risk appetite threshold for capital adequacy ratio shall be escalated to the Audit, Risk & Compliance Committee ("ARCC") / Board. Appropriate remedial steps shall be initiated if deemed necessary.

Breaches of other Risk Appetite Statements are escalated to the ARCC for remediation which will then escalate its recommendation to the Board.

### **Due Diligence Process to Mitigate Investment Risk**

The Company's investments are made after proper review and approval by the Investment Committee. As part of the review process, the Investment Committee evaluates the following risk factors before granting approval:

1. Geo-political situation in the country where investment is to be made
2. Current exposure to the type of investment and/or product
3. Adequacy of liquid surplus after such investment is made
4. Review of credit rating of the investment
5. Time horizon, maturity, lock in period and other constraints
6. Partners involved in the transaction and their financial commitment
7. Legal and tax due-diligence and other appropriate due diligences

All investments are made only after obtaining the approval from the Investment Committee.

## **4.1 General Qualitative Disclosure of Risks**

### **4.1.1. Credit Risk**

Credit risk is one of the most important risks that the Company faces in its operations and it is the failure of one or more of its major counterparties. It could be defined as the risk of a potential loss due to a counterparty failure or an obligor's non-payment of an outstanding debt.

Credit risk is principally controlled by establishing and enforcing limits and by defining exposure levels to counterparties and checking the creditworthiness of counterparties that are not related parties. To mitigate this risk, the Company has diversified its banking relationships across several local and international banks.

As at December 31, 2018, the Company's cash and cash equivalents position stood at SAR 47.9 m and these are all placed with financial institutions, while receivables and other investment amounted to SAR 60.7 m. Under the standardised Pillar 1 methodology, the capital required to cover credit risk in respect of these assets is SAR 37.3 m.

The Company shall measure and maintain capital for credit risk as per the methodology set by the CMA under the Standardized Approach. Most of the credit risk for the Company originates from investments and receivables.

### **4.1.2. Market Risk**

Market risk is the risk that the value of an investment will decrease due to movements in the market. The CMA has listed the following as key market risks:

- a) Equity and fund risks;
- b) Interest rate risk;
- c) Commodities risk;

- d) Foreign exchange risk;
- e) Underwriting risk; and
- f) Settlement risk.

After discussions with external auditor and considering that the Company does not have a trading book, the only market risk that is applicable to the Company is foreign exchange risk related to investment activities.

Foreign exchange risk is the risk that the fair value or future cash flows of financial instruments will fluctuate because of changes in foreign exchange rates. There are two ways where changes in foreign exchange rate could adversely impact the capital position of the Company and these are through either our investment in foreign currency products or the value of fees generated from foreign currency funds managed by the Company declining in value as compared to our base currency of Saudi Riyals.

In respect of the Company's exposure to non-Saudi Riyals denominated income and expenses, the Company tries to match payment with any income in that currency and vice versa. Open positions in foreign currencies is not something that we take and action is taken to convert open currency positions into Saudi Riyals on a regular basis, thereby, keeping open positions and foreign currency exchange risk to the minimum.

As at December 31, 2018, the Company had long positions in four foreign currencies namely – GBP, USD, EUR and AED. Under Pillar 1, the market risk is calculated at 2% (for USD and AED) and 14% (for AUD, GBP and EUR) of the Saudi Riyals equivalent open positions respectively and amounts to SAR 6 m.

#### **4.1.3. Operational Risk**

Basel II requires financial institutions to have sufficient capital to cover operational risks. Operational risk is defined as risk of loss resulting from inadequate or failed internal processes, people and systems and also the risk of loss arising from external events. Additionally, Basel II provides opportunity to improve the internal control and risk measurement processes through supplementary by supervisory review process and market discipline through Pillar II as well as Pillar III of the Accord.

#### **4.1.4. Interest Rate Risk**

The Company's financial position's exposure to adverse movements in interest rates is referred to as interest rate risk. The Company has no trading book. Since all of the Company's sources of funds are equity and there are no interest sensitive liabilities, Interest Rate Risk on the Banking Book (IRRBB) has no impact on Company's capital requirement.

#### 4.1.5. Concentration Risk

Concentration risk may involve large exposures to groups of connected clients. These groups refer to companies which are legally or economically connected in such a way that majority of the individual companies in the group would likely encounter repayment problems if one of them encountered financial difficulties. Credit risk concentration can generate such large losses that the risk-bearing capacity and continued existence of the Company might be endangered.

##### Types of Concentration risk

Concentration risk can take many forms and can arise whenever a significant number of exposures have similar risk characteristics. Large exposures and high correlation between exposures could increase the amount of losses to the Company and can arise from the following:

- Revenues generated from particular geographical regions/jurisdictions;
- Revenues from a specific client;
- Revenues from a specific product; and
- Revenues from a particular industry or economic sectors.

##### Management of Concentration Risk

Concentration risk is managed through prescription of various prudential / exposure limits.

- **Large Exposures**  
 Currently, the Company is not significantly exposed to any particular client other than related parties. In other cases, the Company has recourse to cash that the debtor has invested with the Company and which can be netted out in the event of default by the debtor.
- **Geographic Concentration**  
 The Company is marginally exposed to geographic concentration as most of its investments are in KSA and Europe. The Company does not actively monitor geographic concentration as the Company is aware that the geographic concentrations are the result of its business model.
- **Industry Concentration**  
 The Company is exposed to industry/sector concentration. The Company is planning to increase the risk appetite levels to justify the exposures to highly concentrated industry sector and shall increase the

## **Basel Pillar III Disclosures**

risk appetite limits and take necessary approvals from the Board to increase such exposures.

### **4.2 Credit Risk Disclosure**

Credit risk consumes the largest proportion of the Company's minimum capital requirement. Within the established principles and parameters, the Company ensures that strict capital discipline is maintained through correct pricing and management of credit risks.

#### **4.2.1. Gross Credit Risk Exposures**

The gross credit exposure as presented in Appendix 3 is reflected before applying any credit risk mitigation, such as financial collaterals and guarantees. Since the Company does not use financial collaterals and guarantees, both gross credit risk exposure and net credit risk exposure are the same.

#### **External ratings**

The Company uses globally recognised credit ratings to determine which credit quality step an exposure corresponds to. Credit ratings of all exposures are individually determined from the above credit rating agencies and mapped to the exposures by assigning a risk weight in accordance with the Prudential Rules.

As per the CMA's Prudential Rules, an Authorised Person which uses credit ratings for a particular exposure category shall use these credit ratings consistently for all exposures belonging to that category.

#### **Credit quality steps**

The Company uses the CMA guidelines in assigning credit quality steps for its credit exposures. The range of the credit quality steps is 1 to 6 and arises due to exposure to financial institutions, investment in companies and funds.

The following are the mappings between the credit rating from each of the credit rating agencies and the credit quality steps with respect to non-trading activities. This is in compliance with the Prudential Rules issued by the CMA.

<b>Credit quality step - Long term rating</b>	<b>S&amp;P</b>	<b>Fitch</b>	<b>Moody's</b>	<b>Capital Intelligence</b>
<b>1</b>	AAA TO AA-	AAA TO AA-	Aaa TO Aa3	AAA
<b>2</b>	A+ TO A-	A+ TO A-	A1 TO A3	AA TO A
<b>3</b>	BBB+ TO BBB-	BBB+ TO BBB-	Baa1 TO Baa3	BBB
<b>4</b>	BB+ TO BB-	BB+ TO BB-	Ba1 TO Ba3	BB
<b>5</b>	B+ TO B-	B+ TO B-	B1 TO B3	B

### **Basel Pillar III Disclosures**

<b>6</b>	CCC+ and below	CCC+ and below	Caa1 and below	C and below
<b>Unrated</b>	Unrated	Unrated	Unrated	Unrated

<b>Credit quality step - Short term rating</b>	<b>S &amp; P</b>	<b>Fitch</b>	<b>Moody's</b>	<b>Capital Intelligence</b>
<b>1</b>	A-1+, A-1	F1+, F1	P-1	A1
<b>2</b>	A-2	F2	P-2	A2
<b>3</b>	A-3	F3	P-3	A3
<b>4</b>	Below A-3	Below F3	Not Prime	Below A3
<b>Unrated</b>	Unrated	Unrated	Unrated	Unrated

#### **Credit Risk Exposures by Credit Quality**

The credit risk exposure by long term and short-term ratings is given as per Appendix 4 and follows Annex 11 and 12 of the Prudential Rules in determining the credit quality.

#### **Residual contractual maturity**

The residual contractual maturity of the Company's credit risk exposures is given as per Appendix 5.

#### **Impairment, Past Due and Provisions**

An exposure is identified and recognized as impaired when it is not probable or no reasonable assurance exists that the Company will be able to collect all amounts due according to the contractual terms. The exposure can be a receivable from the customers or employees of the Company or an investment made by the Company.

Past due claims are exposures where repayments of principal and /or profit charges have not been made as per the due date. The Company's policy defines the approach to be used when determining provisions. Certain factors are taken into consideration prior to deciding on the level of provision.

The Company has Nil past due exposures as of December 31, 2018.

#### **Geographic Distribution of Credit Risk Exposures**

Credit risk exposures of the Company are geographically concentrated in KSA and Europe. The following table provides geographic distribution of credit risk exposures by geography.

(SAR 000)

Exposure Class	Total	Saudi Arabia	GCC (Except Saudi Arabia)	Europe	Rest of the World
<b><i>Credit Risk</i></b>					
<i>On-balance Sheet Exposures</i>					
Governments and Central Banks					
Authorised Persons and Banks	47,915	41,029		6,886	
Corporates	8,753	124	2,649	5,361	619

Securities borrowing/lending					
Commitments					
Other off-balance sheet exposures					
<b>Total Off-Balance sheet Exposures</b>	<b>-</b>	<b>-</b>			
<b>Total On and Off-Balance sheet Exposures</b>	<b>121,642</b>	<b>52,392</b>	<b>2,649</b>	<b>65,829</b>	<b>772</b>

#### 4.3 Credit Risk Mitigation Exposure

The Company does not deal in lending activities and as such has no eligible or non-eligible financial collaterals uses for credit risk mitigation purposes. Accordingly, credit risk mitigation exposures are Nil.

Appendix 6 provides details of gross and net credit risk exposures.

#### 4.4 Counterparty Credit Risk (CCR) and Off-Balance Sheet Disclosure

Counterparty risk is derived from the exposure to a single party in a financial transaction or business transaction. It is the risk in a transaction that may occur if the counterparty is unable to perform in accordance with the agreements executed with the Company.

## Basel Pillar III Disclosures

The Company does not deal with transactions in OTC derivatives, repos and reverse repos and securities borrowing/ lending. The Company does not have any outstanding guarantees as of December 31, 2018.

### Mitigating Counterparty Risk

- The Company sets criteria for appropriate due diligence analysis including processes for measuring and managing counterparty risk.
- The Company sets criteria for selecting and maintaining relationships with counterparties.
- The Company sets controls that limit the exposure of capital to single counterparty expressed as a percentage of the Company's capital base (if applicable).
- The Company conducts periodic reporting and monitoring of counterparty exposures to the Investment Committee (if applicable).
- The Company takes actions to mitigate Company's exposure in the event the financial condition of a counterparty deteriorates and doubts arise as to its ability to perform in accordance with the agreements and contracts the Company has executed.

## 4.5 Market Risk Disclosure

### 4.5.1. Market Risk Capital - Qualitative Disclosure

Market risk is the risk of loss in on-and off-balance sheet trading book positions arising from movements in market rates or prices such as profits rates, foreign exchange rates, equity prices, credit spreads and/or commodity prices resulting in a loss to earnings and capital.

### 4.5.2. Market Risk Capital - Quantitative Disclosure

(Amounts in SAR 000)

<b><i>Market Risk</i></b>	<b>Capital Required 31 Dec 2018</b>	<b>Capital Required 31 Dec 2017</b>	<b>%</b>
Interest rate risks			
Equity price risks			
Risks related to investment funds			
Securitisation/re-securitisation positions			
Excess exposure risks			
Settlement risks and counterparty risks			
Foreign exchange rate risks	6,212	5,985	3.79
Commodities risks			
<b>Total Market Risk Capital</b>	<b>6,212</b>	<b>5,985</b>	<b>3.79</b>

#### 4.6 Operational Risk Disclosure

Operational risk is the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events.

Basel II requires financial institutions to have sufficient capital to cover operational risks. Operational risk is defined as risk and loss resulting from inadequate or failed internal processes, people, systems and also the risk of loss arising from external events. In addition to the regulation, Basel II provides opportunity to improve internal control and risk measurement processes supplemented by supervisory review process and market discipline through Pillar II as well as Pillar III of the Accord.

##### 4.6.1. Operational Risk Capital - Qualitative Disclosure

Risks in this category are broad in nature and inherent in most businesses and processes and cover the following:

- **Fraud or the risk of loss from financial crime**  
 The Company aims to minimise the opportunity for fraud and financial crime through segregation of duties and due process. In addition, the Company has outsourced its AML and terrorism financing courses for staff to Thomson Reuters.
- **Outsourcing risk**  
 This is the risk of loss or reputational damage as a result of service failure on the part of an outsourced service provider. The Company does outsource certain fund administration services to reputable service providers operating in well-regulated offshore centers. The Company undertakes a rigorous selection process of service providers and has an ongoing due diligence process.
- **Employee retention**  
 The Company recognizes that due to its small size there is an operational dependency on key individuals and the loss of a member could have a material adverse impact on revenues. The Company has implemented a competitive remuneration package for staff. The Company has a succession plan at the highest level of management to ensure compliance at all levels by ensuring that key staff are identified and supported by a second-in-charge.
- **Legal action**  
 The risk of liability related to litigation from clients, staff or third parties is covered under legal action. This risk is mitigated by compliance with existing legislation, which is reinforced by internal policies and monitoring checks. The Company has also both Professional Indemnity and Directors and Officers Liability insurance arrangements in place. As of 31 December 2018, there is only one legal case pending against Sidra Capital at the commercial court in Jeddah,

## Basel Pillar III Disclosures

Saudi Arabia. The management believes that the Company is in strong position and this is supported by our lawyers.

- **Business continuity and disaster recovery**

Physical disasters affecting the Company's premises and continued operations could come in many different forms – fire, flood, failure of IT systems, hacking, etc. Each of these different threats presents a risk to the Company. However, the impact of these different threats materialising will have many common implications which are detailed in the Disaster Recovery and Business Continuity Plans of the Company.

### 4.6.2. Operational Risk Capital - Quantitative Disclosure

Under Pillar 1 and using the Basic Indicator Approach, the capital needed to cover operational risks is the higher of 15% of the last 3-year gross operating income or 25% of last year's operating expenditure. For the Company, the capital needed is based on 25% of the last year expenditure and amounts to SAR 7.8m.

Approach	Year	Gross Income	Average Gross Income	Risk Capital Charge (%)	Capital Required
Basic Indicator Approach	2016	33,709	39,739	15%	5,961
	2017	33,136			
	2018	52,372			
Approach	Year	Expenses	Risk capital Charge (%)		Capital Required
Expenditure Based Approach	2018	31,265	25%		7,816
<b>Minimum Operational Risk Capital - December 31, 2018</b>					<b>7,816</b>
<b>Minimum Operational Risk Capital - December 31, 2017</b>					<b>5,628</b>

### 4.7 Liquidity Risk Disclosure

Liquidity risk is the 'potential for loss' to the Company arising from either its inability to meet its obligations or to fund assets as they fall due without incurring unacceptable cost or losses.

Liquidity risks can be classified as-

- Funding liquidity risks: Need to replace net outflows.
- Time risk: Need to compensate for non-receipt of expected inflows,
- Call risk: Due to crystallization of contingent liabilities.

## **Basel Pillar III Disclosures**

Liquidity risk is best understood as Funding Liquidity Risk - the risk that the Company will not be able to efficiently meet both expected and unexpected current and future cash flow needs without affecting either daily operations or its financial condition. This is the risk that the Company does not have the available resources to meet its payment obligations as they fall due or can only secure such resources at excessive cost.

### **4.7.1. Risk Assessment Methodology**

The Company identifies the liquidity risk on an on-going basis. To mitigate these risk, the Company's liquidity risk management guidelines requires that the Company maintain enough cash to pay all projected operating costs for a period of 12 months.

### **4.7.2. Risk Measurement Methodology ("Quantitative / Qualitative")**

In order to ensure adequate liquidity availability and healthy funding profile, the Company uses various metrics and internal controls. The liquidity risk measurement approach is qualitative and Early Warning Indicators (EWI) based.

### **4.7.3. Liquidity Early Warning Indicators ("EWI")**

Early warning indicators help in identifying the emergence of increased risk or vulnerabilities in the Company's liquidity risk position or potential funding needs

The EWIs measure the liquidity risk position of the Company from various perspectives, including the following:

1. Adequacy of funding buffer
2. Unutilized banking limits
3. Adherence to regulatory limits
4. Repeated incidents of breach of internal limits

### **Risk Mitigation**

Liquidity risk is mitigated by the fact that the Company has no debt, maintains cash levels in excess of regulatory capital requirements and its main cost items are discretionary compensation which is linked to profitability. It also includes the risks that investments in illiquid instruments cannot be exited in an efficient manner in the event of a downturn.

To mitigate these risk, the Company's liquidity risk management guidelines requires that the Company maintain enough cash to pay all projected operating costs for a period of 12 months. In respect of investing in long term projects, the Company only invests in its own products. All investments are approved by the Investment Committee and regular reporting on performance and risks are made by the respective Head of Divisions on the use of the Company's capital.

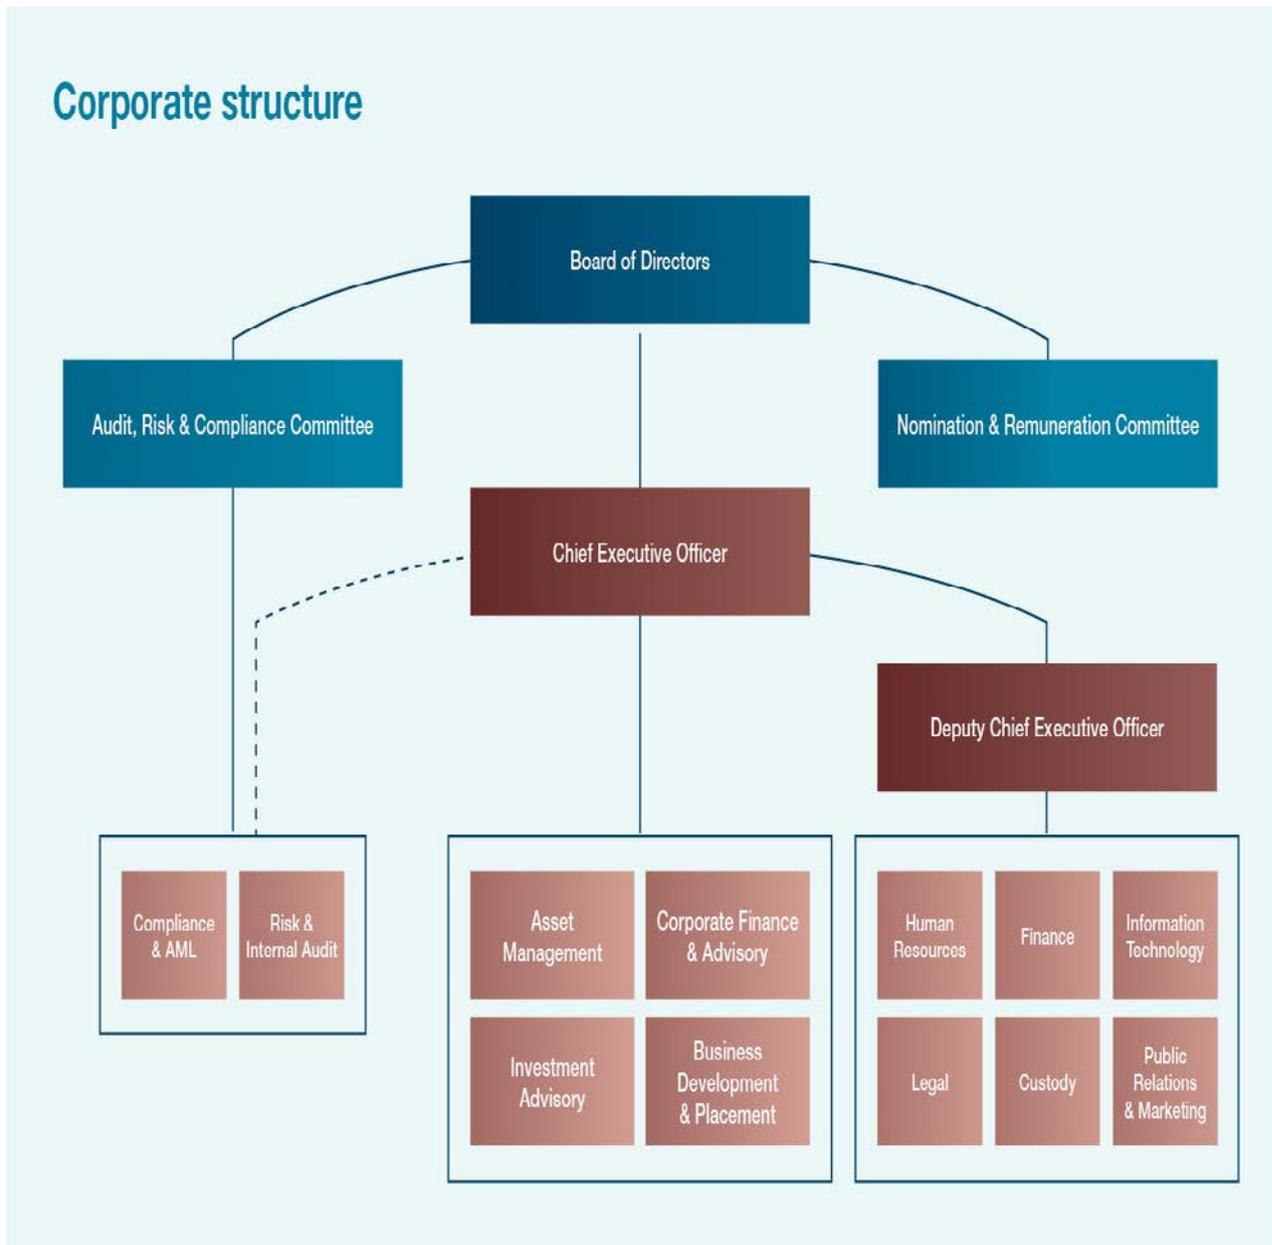

**4.7.4. Contingency Plan**

The Company has a general contingency plan for dealing with divergences and unexpected events. The Company has a single major shareholder that can provide for additional capital in the event of major events. The Company can also swiftly modify its business plans to focus on advisory services that require little or no capital.

**Contingency Buffer**

The Company proposes to maintain a contingency buffer needs equivalent to 12 months of working capital needs.
